KVM Switch 1 - 4

Details correct on: 09/12/2014

Notification	
Product Code	KVM-510D
Short Description	4 port KVM with on screen display
Full Description	The KVM CPU Switch Boxes allow you to access multiple computers from one keyboard, mouse and monitor. There is no interface card or software to configure. Installation is as easy as connecting cables between the CPU Switch and your computers. Operation is as simple as pressing buttons, entering hotkey command and navigating through the user-friendly on-screen menu (available on models with OSD support). The KVM CPU Switch is independent of computer operating systems, allowing the attached computers to run different applications. For KVM Switch Boxes with built-in OSD control, you can name your computers, switch to a computer from a list, configure settings with easy-to-use menus, view the name of the selected computer on-screen with programmable time interval. The OSD displays the system status throughout operation. Improved technology ensures steady OSD menu between computers of different VGA resolutions and smooth switching without leaving OSD garbage characters on the screen. Rextron
